## Subject: Mathematics

Level: S. 2

## Learning objectives

1. Content

Student should be able to:
practise expanding algebraic expressions

## 2. Language

Student should be able to:
read algebraic expressions correctly using technical wording such as "the square of", "a plus two times ab"

## S. 1 Mathematics Worksheet 1 for Student A

Name: $\qquad$ Class: $\qquad$ No. $\qquad$ Date: $\qquad$

The following identities may be helpful to you while you work with your partner.

1. $(a+b)(a-b) \equiv a^{2}-b^{2} \quad$ read as
$\underline{a} p l u s \underline{b}$ times $\underline{a}$ minus $\underline{b}$ is identical to the square of a minus the square of $\underline{b}$.
2. $(a+b)^{2} \equiv a^{2}+2 a b+b^{2}$ read as

The perfect square of $\underline{a}$ plus $\underline{b}$ is identical to the square of $\underline{a}$ plus two times $\underline{a b}$ and then plus the square $\underline{b}$
3. $(\mathbf{a}-\mathbf{b})^{2} \equiv \mathbf{a}^{2}-\mathbf{2 a b}+\mathbf{b}^{2}$ read as

The perfect square of $\underline{a}$ minus $\underline{b}$ is identical to the square of $\underline{a}$ minus two times $\underline{a b}$ and then plus the square $\underline{b}$.

## Work in pairs

Student A reads questions 1-4 to Students B slowly.

Student B writes down what A says and uses the identities provided to expand the algebraic expressions one by one.
Student A writes down what B says in B's answer Column, (in mathematical symbol form) In the Marking column, put a ' $\checkmark$ ' for the correct answer or a ' $X$ ' for the wrong one.

Write down the total number of correct answers.

## Questions

1. Expand $(x+4)(x-4)$
2. Expand $(3 x+2)(3 x-2)$
3. Expand $(3 x-1)^{2}$
4. Expand $(4 x+3 y)^{2}$

Correct Answer
$x^{2}-16$
$9 x^{2}-4$
$9 x^{2}-6 x+1$
$16 x^{2}+24 x y+9 y^{2}$

B's answer

Marking

The total number of correct answers $\qquad$
Now change roles.
Point out mistakes to your partner when both of you have finished. Check how to say correctly the ones you got wrong.

## Work in pairs

Student B reads questions 5-8 to Student A slowly.

Student A writes down what B says and uses the identities provided to expand the algebraic expressions one by one.
Student B writes down what A says in A's answer Column, (in mathematical symbol form) In the Marking column, put a ' ${ }^{\wedge}$ ' for the correct answer or a ' $X$ ' for the wrong one.

Write down the total number of correct answers.
