[HKIED selects Cisco data centre solution](#)

Posted by [Tony Chan](#) on Mar 10, 2009 in [Data centres](#), [ICT](#)

The Hong Kong Institute of Education has deployed a 10 Gigabit Ethernet data centre network using Cisco gear. The new data centre infrastructure will consist of Cisco Catalyst 6500, Virtual Switching System 1440 and Cisco Applications Control Engine Module.

“We strive to deliver state-of-the-art technology to meet the evolving needs of our students, staff and the community. Cisco’s next-generation data centre solution helps us build power-saving, resilient and efficient networks while optimizing network resource usage. This further solidifies our competitive position internationally through the high-bandwidth, highly available solution that connects everyone anywhere anytime,” said Francis Fong, Information Technology Manager, Office of Information Technology and Services, HKIED. “We selected Cisco because it has proven track record in the education sector that we believe will help us become a leading tertiary institute in the Asia Pacific region.”
